

# Top Tips for Maximizing Treatment and Quality of Life in Primary Progressive Aphasia

Primary progressive aphasia (PPA), a subtype of frontotemporal dementia, is characterized by pronounced language impairments that significantly affect an individual's functioning and quality of life. This Webinar provides an overview of the diagnosis, symptoms, and treatments associated with the three subtypes of PPA, as well as insights into the brain regions involved. Additionally, it aims to empower caregivers by equipping them with essential knowledge and resources.

**February 11, 2025**  
**12:00 - 1:00pm**

To Register for this Virtual Presentation, Please Call the Dodge County ADRC at **920-386-3580**

Dr. Michelle Braun, Ph.D., ABPP-CN is a board-certified, Harvard- and Yale- trained, award-winning neuropsychologist and national leader in the field of brain health and cognitive functioning.
