

WHY GEO?

Tuesday, September 19 at noon

An online conversation

Free and open to all

[RSVP HERE](#)

Heat is a precious resource in Northern New England states where we share a colder climate and take much of our character from our more rural communities.

Vermont Community Geothermal Alliance is offering this regional event open to anyone in Vermont, New Hampshire, Maine, and nearby states to talk with a wide range of local experts working in or adjacent to geothermal:

- **George Martin, LN Consulting** on current geothermal projects in VT
- **Steve Smith, SAS Architects** on designing with geothermal solutions
- **Dana Clawson, Sustainability Coordinator**, Town of Hartford on why reusing heat matters
- **Juliet Walsh, Office of Senator Peter Welch** on her recent trip to Iceland as part of a congressional delegation traveling to learn more about geothermal
- **With special guests, including Bryant Jones of Geothermal Rising**

We'll find out what they're excited about and what they think is needed to realize the potential of using the heat we already have under our feet and in our communities. We'll also collect what people on the call want to know and how we can support more geothermal & thermal energy network development across our region.

Please join us on Tues, Sept 19 at noon.
